

Changes in Poverty and Educational Attainment, 2000 to 2007
Poverty Rates Increasing for those with College Education, Too

While poverty rates remained much lower for those with more education, there is evidence that those with higher education are being adversely impacted by the state's poor economy since 2000 as much or more as those with less education.

In **Ohio** the poverty rate increased by more than 50 percent (56.7%) for persons with some college or an Associate's degree between 2000 and 2007, based on an analysis of the 2000 Census and the 2007 American Community Survey, released August 26, 2008. An estimated increase of 66,000 persons with some college, but short of a Bachelor's degree, raised the poverty rate for this population from 5.5 percent to 8.5 percent in that period. Though more Ohioans were achieving academic success, the lack of jobs, especially those with higher wages, prevented a concurrent increase in economic viability.

Persons with a Bachelor's degree or higher educational level and below poverty in income also increased in number and percentage. Indeed, the poverty rate in Ohio increased at about the same rate for those with a Bachelor's degree (24.5%) as it did for those with less than a high school diploma (23.2%). The 2007 poverty estimate was 23.2 percent for those without a high school diploma and 3.4 percent for those with a Bachelor's degree.

There were an estimated additional 20,000 persons with a Bachelor's degree who were below poverty in 2007 than there were in 2000. The estimated number of persons with a Bachelor's degree increased by about 280,000, though as noted above, the number of them that were below the poverty level increased faster than those above the poverty income threshold.

Those with a high school diploma in Ohio experienced a 38.1 percent increase in poverty rate --- from 7.8 percent to 10.8 percent. This group swelled by an estimated 91,000 persons in those seven years.

Meanwhile, there was an estimated net loss of about 6,000 persons below poverty who did not have a high school diploma. Persons with less than a high school diploma declined in number since 2000 -- by more than 250,000 -- it was the only population group among those ages 25 and older that lost in numbers. This decline is likely due to mortality and migration of the older

population, which is generally less educated than those younger, and migration of those younger and less educated age groups to look for employment.

In **Cuyahoga County**, those with some college or an Associate’s degree also had the greatest increase (39.2%) in poverty rate, from 7.2 percent to 10.0 percent. Poverty rates also increased for those with a Bachelor’s degree or higher educational attainment. The county lost an estimated 21,000 persons with some college or an Associate’s degree who were at or above the poverty level of income, but gained 5,300 that were below poverty. The county gained in the estimated number of persons with a Bachelor’s degree – both among those above and below poverty – but those below poverty increased faster than those at or above poverty.

Meanwhile, in **Cleveland**, though the 2007 estimates are based on a small sample and should be viewed with some caution, there was an apparently smaller increase in poverty for persons age 25 and older than in the state or county --- 3.29 percent versus 29.6 percent and 15.5 percent for the state and county, respectively. In Cleveland, the increase in poverty rate was least among those with some college or an Associate’s degree (15.7%) – considerably less than in the county or state. This may reflect a job availability profile that better fits the city’s population than that of the rest of the county or state, as well as movement of those with some college to the inner-ring suburbs.

In summary, the spread of poverty to the suburbs of Cuyahoga County and other parts of the state is apparent in these numbers and is being felt by increasing numbers of more educated persons.
